

FOR IMMEDIATE RELEASE

Tiger Aircraft Receives Additional Investment for R&D

Tiger Aircraft LLC announced that the investors in the aircraft manufacturer have committed additional funding for continued research and development.

According to N. Gene Criss, President of Tiger Aircraft, the investment will be used for research and development of various model refinements including the latest innovations in glass cockpit avionics. “We are grateful that our progress to date has been recognized by our investors and rewarded by this substantial investment above and beyond the millions that were originally committed to Tiger Aircraft.”

The cash infusion will be in the millions of dollars and will be earmarked for upgrades and possibly to certify a variant of the venerable Tiger design. “Nothing we do will ever compromise the agility and excitement of the aircraft,” explained Criss. “Tiger is a breed apart, renowned for the responsiveness of its ride and we are committed to enhancing that reputation and pilot experience.”

Tiger Aircraft LLC was formed to revive, enhance, and build one of the most celebrated airplane designs in general aviation history—the Tiger. Tiger Aircraft is dedicated to upholding the Tiger tradition: providing the most exhilarating, agile, and dependable fixed-gear planes available in general aviation.

Today’s Tigers are built in a new manufacturing facility in Martinsburg, WV constructed especially to build the planes. This month marks the fifth anniversary of the facility’s dedication.
